

Name = Yuson Ghale

Class = 6 'Lily'

Roll No = 14

Space Travel Handwriting

We have entered the era of space travel. Men who will first land on the moon are already among us. Time is not far off when we will travel to other planets as we travel now to other countries. Gagarin, Titov, Sheppard, and others have already proved that it is possible to cross the limit of the gravity of the earth and travel anywhere in space.

In order to escape the gravitational pull of the earth, a speed of at least seven miles per second is necessary. This speed is possible only by means of a rocket. It is an aeroplane that flies up speedier than a bullet.

It has to be fired in a fixed direction like a gun. When it escapes the gravitational pull of the earth, another rocket comes out of the first rocket and continues the journey upward to any destination.
